Glossary:

CVR (Conversion Rate) = orders ÷ sessions. The proportion of website visits that resulted in a purchase. Higher = better.

Shopify CVR = Shopify orders ÷ GA4 sessions. Higher than GA-only CVR because Shopify counts all orders including subscription auto-renewals, mobile app, and untracked sessions.

RPS (Revenue Per Session) = revenue ÷ sessions. The average revenue generated by each website visit. Higher = better.

Shopify RPS = Shopify revenue ÷ GA4 sessions.

AOV (Average Order Value) = revenue ÷ orders.

* Revenue: Shopify source of truth used everywhere it's available (all 4 brands this month).
